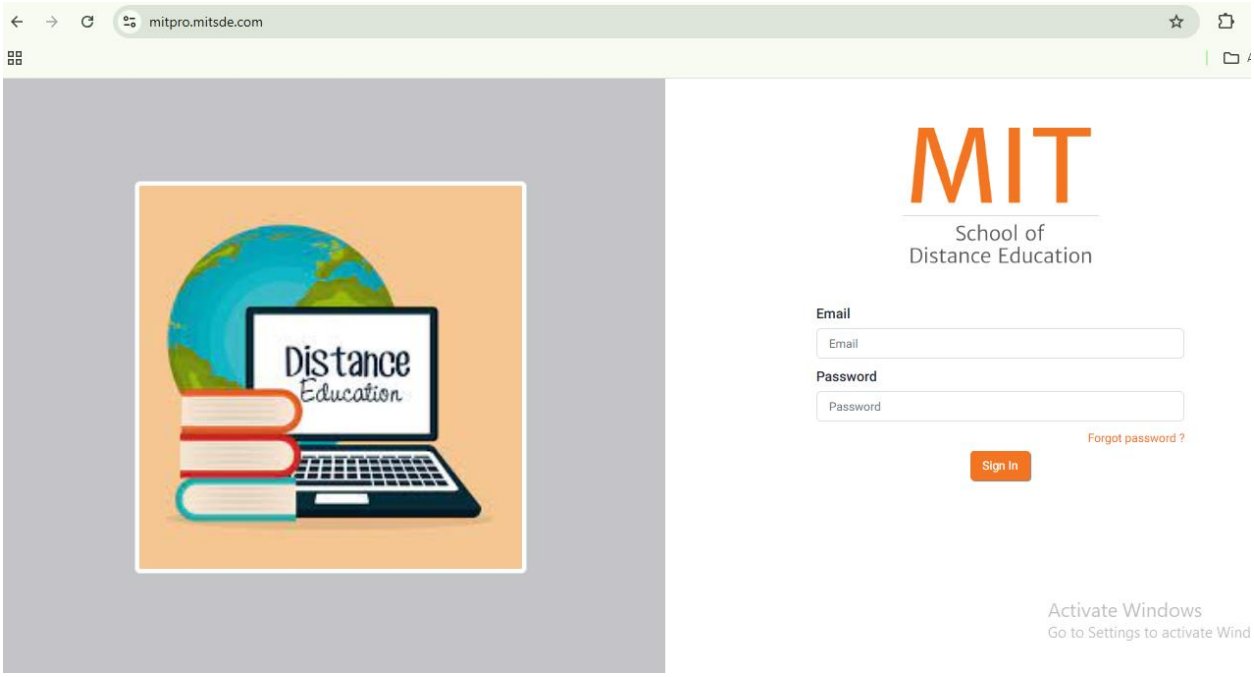
ERP SOFTWARE



MITSDE ERP SYSTEM OVERVIEW

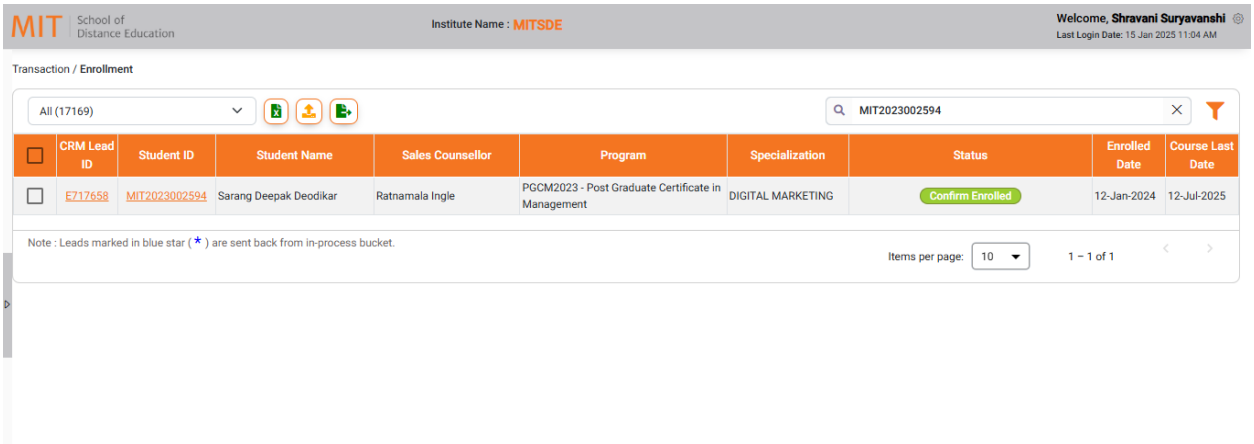
An ERP (Enterprise Resource Planning) system is a centralized platform designed to integrate and streamline the core functions of an organization. It brings together various processes, such as data management, reporting, inventory, and communication, into a single system, enabling improved efficiency, accuracy, and decision-making.

At MITSDE, we implemented the ERP system in 2015 to oversee and manage key operations, including student enrollment, reporting, and administrative tasks. Since then, the system has been integral to creating comprehensive reports such as Student-Wise Reports, Advance Bank Reports (ABR), Enrollment Reports, and more. Additionally, the ERP supports inventory management, vendor interactions, dispatch activities, and student care, ensuring smooth operations across all departments.

By centralizing these processes, the ERP system has enabled MITSDE to maintain a high level of organizational efficiency, reduce manual efforts, and provide a better experience for both

students and staff. This system has been the backbone of institutional management, allowing for seamless coordination and improved productivity over the years.

Enrolment Management Page Overview



The Enrolment Management page within the MITSDE ERP system is a central hub for managing and tracking student enrolment processes. This page provides detailed information about the status of student enrolments and helps streamline the process for administrators.

The main section of the page displays enrollment data, including essential details about students, their assigned counselors, program information, and enrollment status. This layout helps administrators track the progress of each student and take necessary actions when required.

This page is especially useful for confirming enrollments, addressing pending or returned cases, and maintaining accurate records. By offering a centralized and user-friendly interface, it ensures smooth coordination between departments and facilitates effective enrollment management.

Enrolment Details Page

The **Enrollment Details Page** is a detailed interface that provides an in-depth view of a student's enrollment information. Upon selecting a student ID from the enrollment list, this page displays all the relevant details about the student and their enrollment process in an organized format.

The page is divided into multiple sections, such as "Summary," "History," "Checklist," "Program," "Academics," "Employment," and more. Each section is designed to provide specific information, enabling administrators to review, update, and manage the student’s records effectively.

The "Summary" tab presents key details, including the student's personal information, program details, enrollment status, and LMS credentials. This layout ensures that all critical data, such as

course specialization, counselor assignment, and enrollment dates, is readily available at a glance.

This page is particularly useful for confirming enrollments, monitoring progress, updating records, and resolving issues efficiently.

Reports

The ENR Report Page is a vital tool for tracking and analyzing enrollment activity within the MITSDE ERP system. It allows administrators to monitor trends by generating reports based on specific date ranges, student IDs, CRM Lead IDs, or receipt numbers. This feature supports data validation, financial reconciliation, and custom reporting, making it easier to analyze enrollment patterns, cross-check payments, and address specific cases effectively. By providing tailored insights, the ENR Report Page ensures accurate record-keeping and informed decision-making.

Master Section:

In the ERP system, the **Master Section** serves as a central repository for maintaining organizational data, including detailed information about employees. This section is designed to ensure that all employee-related data is organized, accessible, and up to date.

Within the Master Section, MITSDE manages critical details such as employee profiles, roles, departments, designations, and contact information. This structured approach supports seamless coordination among staff members and ensures that the organizational hierarchy and responsibilities are well-documented.

In this section, we have various masters, including those for organizational details, employee information, education, checklists, program fees, and inventory. These masters ensure that all critical data, such as the institution's structure, roles, employee profiles, qualifications, tasks, fee structures, and resources, are organized and easily accessible.
